

ERRATA TO PMPD

SALTON SEA GEOTHERMAL PROJECT
APPLICATION FOR CERTIFICATION,
DOCKET NO. 02-AFC-02

After receiving written and oral comments from the Applicant and Staff at the Committee Conference on the Presiding Member's Proposed Decision, the Committee makes the following minor changes:

Substantive Changes

AQ-C3 and **AQ-C4**: The Committee has amended its construction dust mitigation standard, which appears in **AQ-C4**, to substitute the size observable dust plumes within the project site, coming from linear facility construction, or blowing toward occupied structures. This standard is more readily ascertainable and enforceable than the 20 percent opacity standard previously used. The dust mitigation measures in **AQ-C3** refer to this standard in **AQ-C4**.

BIO-C1 through BIO-C9: The Committee has added conditions which recommend mitigation to Imperial County based upon our review of the entire project. These mitigation measures apply to project features, mostly pipelines and well pads, which are not within the jurisdiction of the Energy Commission, but which we have reviewed under the California Environmental Quality Act.

BIO: The Committee amends various Biology Conditions of Certification to conform to the federal Biological Opinion, which was released during the comment period on the Presiding Member's Proposed Decision.

Editorial/Typographical

The Committee made non-substantive changes in the following topic areas based upon Staff's comments: Executive Summary, Project Description, Air Quality, Biology, Hazardous Materials, Noise, Public Health, Socioeconomics, Waste Management, Water Quality & Soils, Facility Design, Reliability, General Conditions, and the Adoption Order.

Dated: December 15, 2003
